

Table of Contents

Introduction	11
Reasons for Moving to Linux	11
Major Topics Covered	12
Some Possible PC Configurations	12
Target Audience	13
Prerequisites	13
Hardware Requirements	13
Software Requirements	13
Approach Taken in this Book	14
1. Linux Basics	15
1.1 A Strategy for Moving to Linux	15
1.2 Choosing a Linux Distribution	16
1.2.1 History and Choices	16
1.2.2 Linux Distributions to Choose From	19
1.3 Getting a Linux Distribution	20
1.4 Testing Linux	21
1.4.1 Making a Linux Installation Disk or Flash Drive	21
1.4.2 Live Booting Linux	22
1.5 Installing Linux	23
1.6 Navigating Linux	24
1.6.1 Logging In	24
1.6.2 Menu System	24
1.6.3 Updating the System	25
1.6.4 Virtual Desktops	25
1.6.5 Mouse Operation	27
1.6.6 Switching the Screensaver Password On or Off	27
1.6.7 Changing the Desktop Wallpaper	27
1.6.8 Switching off Sounds	27
1.6.9 Changing the Time and Date	28
1.6.10 Adding a Network Activity Display	28
1.6.11 Adding Users	28

1.7 The Linux File System	29
1.8 Installing and Removing Applications	31
1.8.1 Application Installation Example	31
1.8.2 Removing Applications	32
1.8.3 Other Methods of Installing Applications	32
1.9 Everyday Applications and Tasks	33
1.9.1 Everyday Applications that Run on Windows and Linux	33
1.9.2 Removable Media and Partitions	35
1.9.3 Installing a Printer	35
1.9.4 Finding Files	36
1.10 The Command Line	37
1.10.1 Some Useful Commands	38
1.10.2 Time Saving Tricks	40
1.11 Shortcut Keys	42
1.11.1 Moving Obscured Windows	42
1.11.2 Starting the “Run Application” Dialog Box	43
1.11.3 Navigating the Desktop Environment	43
1.12 Resources for Learning Linux	43
1.12.1 Recommended Free Book	43
1.12.2 Forum	44
1.12.3 Documentation and Help	44
1.12.4 Viruses, Firewalls and Defragmenting	44
2. Creating Schematics and PCBs with KiCad	45
2.1 Installing KiCad	45
2.2 A Quick Overview	46
2.3 KiCad Tutorial 1 – Transistor Circuit	47
2.3.1 Schematic Capture using KiCad	48
2.3.2 Assign Footprints to Components using CVpcb	60
2.3.3 Laying out the PCB using PCBnew	62
2.4 KiCad Tutorial 2 – IC Circuit	78
2.5 Generating Output Files for Manufacture	84
2.6 Laying Out Double Sided PCBs	86
2.7 Other Tips and Techniques	87

3. Creating KiCad Library Parts	89
3.1 Creating a Schematic Symbol	89
3.2 Creating a PCB Footprint	95
3.3 Using the Newly Created Component	101
3.3.1 Using the New Library in EESchema	101
3.3.2 Using the New Library in CVpcb	101
3.3.3 Using the New Library in PCBnew	102
3.4 Downloading and Installing KiCad Libraries	102
3.4.1 Finding and Downloading KiCad Libraries	102
3.4.2 Installing KiCad Libraries	103
4. Open-source Hardware: Arduino	105
4.1 Arduino Uno Technical Description	108
4.2 Arduino Quick Start Instructions	109
4.3 Arduino Hardware	111
4.3.1 Arduino Uno Current Per I/O Pin	112
4.3.2 Available Arduino Uno Pins	114
4.3.3 Circuit Diagram / PCB Layout	114
4.3.4 Home-made Arduino	115
4.4 More Example Projects	115
4.4.1 Using the PWM	115
4.4.2 Arduino Serial Communications and Inputs	116
4.4.3 LCD Displays	123
4.4.4 Further Examples and Learning	125
4.5 Using the Ethernet Shield	126
4.5.1 Setting Up and Testing the Arduino and Ethernet Shield	127
4.5.2 The Ethernet Shield Hardware	129
4.5.3 Implementing an Arduino Web Server	130
4.5.4 SD Card Web Server	133
4.6 Building Your Own Shield	135
4.6.1 Veroboard shield	135
4.6.2 PCB Shield	136

5. AVR 8-bit Microcontrollers	141
5.1 An Overview of 8-bit AVR	141
5.1.1 tinyAVR Microcontrollers	141
5.1.2 megaAVR Microcontrollers	144
5.2 AVR Programmers	146
5.2.1 AVR Programming Software and Test Hardware	147
5.2.2 Parallel Port AVR Programmer	150
5.2.3 Serial Port AVR Programmer	151
5.2.4 USB AVR Programmer	154
5.2.5 The Atmel AVRISP mkII USB Programmer	160
5.2.6 The Atmel AVR Dragon	161
5.2.7 More on avrdude	163
5.3 AVR Circuits	164
5.3.1 ATtiny2313	165
5.3.2 ATtiny48	166
5.3.3 ATtiny25	167
5.3.4 ATmega8	169
5.3.5 ATmega16	170
5.3.6 ATmega48PA	171
5.4 AVR DebugWIRE/JTAG Tools	173
5.4.1 The AVR Dragon	173
5.4.2 The AVR JTAGICE mkII	174
5.4.3 Debugging Software	175
5.4.4 DebugWIRE	175
5.4.5 JTAG	178
5.4.6 Debugging	179
5.4.7 Automating the Debugging Setup	181
5.5 Using the AVR Dragon to Reset AVR Fuses	182
5.5.1 Connecting the AVR	182
5.5.2 Resetting the Fuses	184
6. MSP430 16-bit Microcontrollers	187
6.1 An Overview of 16-bit MSP430s	188
6.2 MSP430 Programming Software	190
6.2.1 Installing a MSP430 C compiler	190
6.2.2 Installing MSPDebug	190
6.3 The MSP430 LaunchPad	190
6.3.1 LaunchPad Features	191
6.3.2 Programming the LaunchPad	192
6.3.3 LaunchPad BoosterPacks	193

6.4 eZ430-Chronos 153	
6.4.1 Running the Chronos demo software	194
6.4.2 Connecting to the Chronos using Python	194
6.4.3 A Simple Program for the eZ430-Chronos	196
6.5 MSP430 ZIF Socket Board	197
6.6 Standard JTAG Tool	199
7. ARM7 32-bit Microcontrollers	201
7.1 Installing the GNU ARM Toolchain	202
7.2 Programming Atmel ARMs via USB	203
8. Linux to LCD Interface	207
8.1 Circuit Diagram	209
8.2 Parts List	210
8.3 Building the Circuit	211
8.4 Testing	212
8.5 Using the LCD with lcd4linux	213
8.6 Example LCD2USB PC Program	216
9. Other Open Source Software	217
9.1 Electronics Tools	217
9.1.1 Circuit Simulator	217
9.1.2 Fritzing	218
9.2 Cataloguing Electronic Parts	222
9.2.1 Designing the Database	223
9.2.2 Creating a Collection Type	225
9.2.3 Adding Components to the Collection	229
9.2.4 Hints for Creating and Adding to Collections	230
9.2.5 Backing Up Collections and Templates	231
9.2.6 Searching Collections	231
9.3 Other Useful and Interesting Software	232
9.3.1 Numerical Computations	232
9.3.2 Running Windows and DOS Programs on Linux	233
9.3.3 Non-Linux Open-source Operating Systems	233

Appendix A – Home Made PCBs	235
Warnings and Safety	235
What You Will Need	236
Safety Equipment	236
Equipment – Hardware	237
Supplies – Consumables	237
Printing the Copper Layer	240
Plotting the PCB from KiCad PCBnew	240
Printing on Photo Paper	241
Cutting the Paper to Size	242
Preparing the Copper-clad Board	243
Determining the Board Size	243
Cutting the Board	245
Cleaning the Board	246
Creating the PCB	247
Iron the Toner Onto the Board	247
Remove the Paper	249
Touching Up the Board	249
Etching the Board	250
Drilling Holes	250
Cutting to Size	251
Cleaning and Tinning	252
Adding a Top Silkscreen	253
Appendix B - Universal Power Supply	257
Circuit Diagram	258
Parts List	259
Setting the Voltage	259
Index	262
