Part I Basics

1	Technical Fundamentals	13
1.1	Introduction	13
1.2	Light	14
1.2.1	Physical Fundamentals	14
1.2.2	Illuminati	18
1.2.3	Illumination Techniques	20
1.2.4	Summary and Notes	26
1.3	Optics	27
1.3.1	Connection	28
1.3.2	Format	29
1.3.3	Focal Distance	29
1.3.4	Aperture	31
1.3.5	Focus	32
1.3.6	Angle of View	32
1.3.7	Minimal Object Distance	33
1.3.8	Depth of Field	34
1.3.9	Resolution	35
1.3.10	Summary and Notes	37
1.4	Image Sensors	40
1.4.1	Physical Fundamentals	40
1.4.2	CCD	40
1.4.3	CMOS	43
1.4.4	Color Processing	46
1.4.5	Summary and Notes	48
1.5	Image Transfer	49
1.5.1	Analog Transfer	51
1.5.2	USB	51
1.5.3	IEEE 1394	52

1.5.4	Camera Link	53
1.5.5	Gigabit-Ethernet	53
1.5.6	GenICam	54
1.5.7	Bandwidth Requirement	55
1.5.8	Driver Encapsulation	56
1.5.9	Notebook Cameras	56
1.6	System Examples	57
1.6.1	Humanoid Robot Head	57
1.6.2	Stereo Endoscope	59
1.6.3	Smart Room	60
1.6.4	Industrial Quality Control	62
1.7	References	64
2	Introduction to the Algorithmics	67
2.1	Introduction	67
2.2	Camera Model and Camera Calibration	67
2.2.1	Pinhole Camera Model	68
2.2.2	Extended Camera Model	69
2.2.3	Camera Calibration	72
2.2.4	Consideration of Lens Distortions	78
2.2.5	Summary of the Calibration Procedure	81
2.3	Image Representation and Color Models	83
2.3.1	Representation of a 2D Image in Memory	84
2.3.2	Representation of Grayscale Images	84
2.3.3	Representation of Color Images	85
2.3.4	Image Functions	89
2.3.5	Conversion between Grayscale Images and Color Images	89
2.4	Homogeneous Point Operators	90
2.5	Histograms	93
2.5.1	Grayscale Histograms	93
2.5.2	Color Histograms	95
2.5.3	Histogram Stretching	96
2.5.4	Histogram Equalization	98
2.5.5	Comparison of Histogram Stretching and Histogram Equalization	99
2.6	Filters	101
2.6.1	Convolution and Filters in the Spatial Domain	101
2.6.2	Filter Masks of common Filters	102
2.6.3	Practical Considerations	106
2.7	Morphological Operators	109
2.7.1	General Definition	109
2.7.2	Dilation and Erosion	110
2.7.3	Opening and Closing	111
2.8	Segmentation	113

2.8.1	Segmentation by Thresholding	113
2.8.2	Color Segmentation	116
2.8.3	Region Growing	120
2.8.4	Segmentation of Geometrical Structures	123
2.9	Homography	131
2.9.1	General Definition	131
2.9.2	Bilinear Interpolation	132
2.9.3	Examples of Specific Homographies	133
2.9.4	Least Squares Computation of Homography Parameters	135
2.10	Stereo Geometry	137
2.10.1	Stereo Triangulation	137
2.10.2	Epipolar Geometry	139
2.10.3	Rectification	141
2.11	Correlation Methods	143
2.11.1	General Definition	143
2.11.2	Non-normalized Correlation Functions	144
2.11.3	Normalized Correlation Functions	144
2.11.4	Run-time	147
2.12	Efficient Implementation of Image Processing Methods	148
2.12.1	Image Access to 8 bit Grayscale Images	148
2.12.2	Image Access to 24 bit Color Images	149
2.12.3	Homogeneous Point Operators	150
2.12.4	Placement of if Statements	151
2.12.5	Memory Accesses and Cache Optimization	151
2.12.6	Arithmetic and Logical Operations	153
2.12.7	Lookup Tables	154
2.13	References	155
3	Integrating Vision Toolkit	157
3.1	Implementation	157
3.2	Architecture	158
3.2.1	The Class CByteImage	158
3.2.2	Connection of Graphical User Interfaces	159
3.2.3	Connection of Image Sources	160
3.2.4	Integration of OpenCV	161
3.2.5	Integration of OpenGL via Qt	161
3.3	Example Applications	162
3.3.1	Use of Basic Functionality	162
3.3.2	Use of a Graphical User Interface	163
3.3.3	Use of a Camera Module	163
3.3.4	Use of OpenCV	163
3.3.5	Use of the OpenGL Interface	164
3.4	Overview of further IVT Functionality	164

Part II Applications

4	Surveillance Technology	171
4.1	Introduction	171
4.2	Segmentation of Motion	171
4.3	Extensions and Related Approaches.....	174
4.4	References and Source Code	175
5	Bar Codes and Matrix Codes	177
5.1	Introduction	177
5.2	Fundamentals	177
5.3	Bar Code Structure (EAN13 Bar Code)	179
5.4	Recognition of EAN13 Bar Codes.....	180
5.5	Matrix Codes	182
5.6	References and Source Code	184
6	Workpiece Gauging	189
6.1	Introduction	189
6.2	Algorithmics	190
6.2.1	Moments	190
6.2.2	Gauging.....	192
6.3	Implementation	192
6.4	References and Source Code	195
7	Histogram-based Object Recognition	199
7.1	Introduction	199
7.2	Implementation	200
7.3	Operation of the Software	201
7.4	References and Source Code	202
8	Correlation-based Object Recognition	207
8.1	Introduction	207
8.2	Automatic Cat Flap <i>Flo Control</i> [®]	208
8.3	Bottle Sorting.....	209
8.4	References and Source Code	210
9	Scale- and Rotation-Invariant Object Recognition	213
9.1	Introduction	213
9.2	Appearance-based approaches	214
9.3	Procedure	214
9.3.1	Undistortion	215
9.3.2	Segmentation	215
9.3.3	Normalization of the Shape	217
9.3.4	Classification	218
9.4	References and Source Code	220

10	Laser Scanning using the Light-Section Method	225
10.1	Introduction	225
10.2	Fundamentals	225
10.3	Geometry	227
10.4	Algorithmics	229
10.5	Operation	232
10.5.1	Calibration Process	232
10.5.2	Scan Procedure and Visualization	234
10.6	Accuracy Considerations	236
10.7	Notes	237
10.8	References	238
10.8.1	Text Sources	238
10.8.2	Other Interesting 3D Scanner Projects	240
10.8.3	Software for Processing the 3D Data	241
10.9	Parts List, CAD and Source Code	242
11	Depth Image Acquisition with a Stereo Camera System	251
11.1	Introduction	251
11.2	Procedure	251
11.3	References and Source Code	254
12	3D Tracking with a Stereo Camera System	259
12.1	Introduction	259
12.2	Approach	259
12.3	References and Source Code	262
13	Outlook	267
13.1	Introduction	267
13.2	Human Motion Capture	267
13.3	3D Object Recognition and Localization	268
13.4	Biometry	269
13.4.1	Iris Recognition	269
13.4.2	Fingerprint Recognition	270
13.5	Optical Character Recognition	270
13.6	References	271

Part III Appendix

A	Installation of IVT, OpenCV and Qt under Windows and Linux	275
A.1	Windows	276
A.1.1	OpenCV	276
A.1.2	Qt	278
A.1.3	CMU1394	279

A.1.4	IVT	280
A.1.5	Summary	284
A.2	Linux	285
A.2.1	OpenCV	285
A.2.2	Qt	285
A.2.3	Firewire and libdc1394/libraw1394	286
A.2.4	IVT	286
B	Mathematics	289
B.1	Vector Analysis	289
B.1.1	Vector Product	289
B.1.2	Inverting a 3×3 -Matrix	290
B.1.3	Straight Lines in \mathbb{R}^3	290
B.1.4	Planes in \mathbb{R}^3	290
B.1.5	Intersection of a Straight Line with a Plane	291
B.1.6	Rotations	291
B.1.7	Homogeneous Coordinates	292
B.2	Numerics	294
B.2.1	Method of Least Squares	294
B.2.2	Gauss Elimination	295
B.2.3	Cholesky Decomposition	296
C	Industrial Image Processing –	
A Practical Experience Report	297
C.1	Introduction	297
C.2	Fundamentals of the EyeVision Software	298
C.3	Test Run	300
C.4	Component Selection	304
C.4.1	Line-scan versus Matrix	304
C.4.2	Process Interfacing	304
C.5	Projects	305
C.5.1	Automatic Pretzel Cutter	305
C.5.2	Gauging	306
C.5.3	Stamping Part Gauging	307
C.5.4	Gauging of Radial Shaft Seals	308
C.6	References	309
Index	311
